

# Prevent serious poisonings in CHILDREN...

- **READ** the label before you give medicine to a child. Use the right dosing cup, measuring spoon or syringe. Put the cap back on tightly.
- Lock medicines and household products up high, where children can't see or reach them. Child-resistant closures are not child proof!
- Keep button batteries where children won't find them.
- Store medicines and products in their original containers.
- Watch children carefully outdoors. Some plants and wild mushrooms are poisonous.
- Install **CARBON MONOXIDE ALARMS** in the hallway near every sleeping area in your home.
